Mortaza Razavi

Full Stack Software Engineer

RazaviDev.github.io | Mr.RazaviDev@gmail.com | @RazaviDev

DETAILS

Location
Kabul, Afghanistan

Phone
+93789276400

LANGUAGES

English - C1

Persian-Dari - C2

Pashto - B1

Russian - A2

CORE COMPETENCIES

- Systems Architecture
- Agile Leadership
- Technical Scoping & ERD
- Rapid Prototyping

EDUCATION

Bachelor of Computer Science
Dec 2022
Bamyan University

PROFILE

Visionary Full Stack Software Engineer with 3+ years of experience architecting high-performance, cross-platform applications. Expertise spans robust backend infrastructure and responsive frontend ecosystems, with a proven track record of delivering secure Fintech, eCommerce, and scalable B2B enterprise solutions for over 25 satisfied global clients.

EXPERIENCE

Software Engineer (System Architect) at Asantech

Jul 2026 - Present

- Designed and delivered enterprise CRM, HRM, and ERP modules with service-oriented backends, REST APIs, role-based permissions, and validated data flows; introduced a geofencing-based automated attendance system that processes live location events through background jobs and clear audit trails.

Full Stack Developer at SquadCore Technologies

Dec 2025 - Jun 2026

- Engineered a high-performance, multi-tenant B2B management platform with Laravel, Vue 3, Vite, and TypeScript, owning the architecture from ERD and service boundaries through production deployment.
- Architected branch-scoped, row-level data isolation, API authentication and permission checks, and hardware-bound UUID licensing to keep tenant data separated and protect application integrity.
- Built reusable frontend components and optimized API and data-fetching paths for complex clinical workflows, including dynamic odontogram charting and treatment plans, while managing Git branch lifecycles and controlled releases.

Software Engineer at VizziPay

Feb 2025 - Aug 2025

- Architected the foundational infrastructure for a high-throughput payment gateway, optimizing for horizontal scalability, fault tolerance, idempotent transaction handling, and minimal latency across service boundaries.
- Applied OWASP-aligned secure coding practices, secrets and access controls, input validation, and cryptographic protocols to protect payment data and third-party integrations in production.

Tech Lead at Persian Store

Jul 2024 - Dec 2024

- Led a cross-functional team of six through discovery, sprint planning, and delivery of a mission-critical MVP, introducing code reviews and Git workflows that kept releases predictable.
- Rebuilt high-traffic customer acquisition and checkout funnels with query and frontend performance optimization, reducing friction and improving conversion and retention.
- Coordinated delivery across 15+ enterprise projects, standardizing documentation, testing, and deployment practices while preserving the core platform's architectural integrity.

TECHNICAL SKILLS

Backend Technologies
C#, ASP.NET Core, .NET Core, REST APIs, Microservices

Architecture & Data
Clean Architecture, SQL Server, EF Core, Redis

Messaging & Realtime
RabbitMQ, SignalR, WebSockets, Background Workers

Frontend Technologies
Next.js, React, TypeScript, HTML5, CSS3

Mobile Development
Flutter, Dart, Firebase (FCM, Auth, Analytics)

DevOps & Servers
Docker, Docker Compose, Linux, Nginx, CI/CD, Git

Observability & APIs
Serilog, Seq, Swagger/OpenAPI, Postman, Health Checks

Integrations & Quality
ERP/CRM, Payments, SMS, Testing, Agile/Scrum
